ACCREDITATIONS & MEMBERSHIPS

CONTINUED PROFESSIONAL DEVELOPMENT STATEMENT.

Our assessment team is committed to upholding a high level of expertise and qualifications.

We strive to ensure our competence in conducting assessments. Competency analysis is a process that identifies the skills, knowledge, and behaviours essential for a specific role or organisation.

We aim to align our skills and experience with the British Standard BS 8674, which establishes a framework for the competence of individual fire risk assessors and serves as a code of practice.

Our assessment team also maintains a Continuous Professional Development (CPD) profile, which is submitted annually to the Institute of Fire Safety Managers. We participate in relevant webinars, research documentation, and engage in both online and in-person training courses to enhance our fire safety knowledge.

Our goal is to maintain a high level of transparency in our operations. We proudly showcase our qualifications and memberships, along with an online portfolio that highlights our experience across various sectors.
